Investor Presentation • 2026

THE PROBLEM

A $15.5 Billion Crisis the Industry Cannot Afford to Ignore

865M

farmed salmon died globally 2012–2022

Nature Scientific Reports, 2024

$15.5B

in mortality costs across 4 nations (2013–2019)

Dead Loss Report — Just Economics

100M+

fish deaths in Norway alone in 2023 (record year)

Norwegian Directorate of Fisheries

Multi-System Complexity

Commercial RAS facilities operate 2–8 independent systems simultaneously. Each has its own water chemistry. No unified tool to manage them all.

Chemical Interdependencies

pH, temperature, NH3, CO2, alkalinity interact continuously. A shift in one triggers cascading effects. Manual interpretation takes hours.

Catastrophic Consequences

Atlantic Sapphire lost $167M in 2024. AquaBounty shut down entirely. Sustainable Blue lost $3.7M in a single CO2 incident. Wrong decisions destroy companies.

No Monitoring Standards

"There are no regulations for which parameters to measure" — Wiley Academic Review, 2023. Each operator flies blind with their own approach.

THE COST OF FAILURE

Every Major RAS Facility Has Experienced Catastrophic Water Quality Events

Atlantic Sapphire *Denmark & Florida*	5+ mass mortality events (2020–2023). 500K fish killed by toxic gas in single incident. $167M net loss in 2024. Share price crashed 80% in one day.
Sustainable Blue *Nova Scotia, Canada*	CO_2 stripper collapsed Nov 2023. 100,000 market-ready salmon dead. $3.7M loss. Supply halted for 7 months.
Proximar Seafood *Japan*	Automated valve malfunction caused oxygen depletion. 170,000 fish killed. Multiple prior biofilter incidents.
AquaBounty *USA*	Costs ballooned from $200M to $375M. Ceased all operations Dec 2024. Sold all facilities. CEO stepped down.

THE SOLUTION

One Platform to Monitor, Calculate, and Decide — in Real Time

What Is Aqua Intel?

Aqua Intel is a proprietary water quality management platform developed by Noras Watertech AS, built on 60+ scientifically validated water chemistry functions.

It connects to any sensor infrastructure, continuously monitors all parameters and their interactions across multiple RAS systems, and synthesizes everything into a single, intuitive visual chart per system.

Operators instantly see:

- Current water quality status (blue indicator)
- Safe and toxic zones for their specific species
- The nearest optimal target point (pink indicator)
- 1–6 actionable management recipes

Continuous Monitoring

Connects to any water quality sensor. Tracks all parameters and their chemical interdependencies in real time across every RAS loop.

Intelligent Calculation

Automatically computes ionized and un-ionized forms of NH3 and CO2. Eliminates manual water chemistry calculations entirely.

Actionable Recipes

Models 9 chemicals simultaneously and generates 1–6 optimum management recipes per scenario. Operators compare solutions and act decisively.

COMPETITIVE LANDSCAPE

"Why Doesn't This Already Exist?"

WHAT OTHERS DO

- Monitor individual parameters in isolation
- Display raw sensor data on dashboards
- Set simple threshold alarms (high/low)
- Require manual interpretation by operators
- No understanding of chemical interactions
- No actionable recommendations

WHAT AQUA INTEL DOES

- Models the full complexity of water chemistry
- Calculates derived toxic forms in real time
- Maps safe/toxic zones per species and life stage
- Generates optimum management recipes
- Manages 2–8+ systems from one dashboard
- 60+ scientific functions powering the platform

Only 30–40% of existing facilities use continuous automated monitoring. IoT-based systems reduce mortality by 34%. The gap is massive — and Aqua Intel fills it.

VALUE PROPOSITION

Measurable Impact for RAS Operators

39%

improvement in feed efficiency with IoT monitoring

Reduce Operating Costs

Calculates CO2 values to eliminate redundant sensors. Optimizes chemical dosing recipes, reducing reagent waste and operational spend.

34%

reduction in mortality with automated monitoring

Prevent Catastrophic Loss

Proactive monitoring prevents mass mortality events. Each €300M RAS facility holds millions in biological assets at risk every day.

48-72h

early warning before critical failures

Accelerate Decision-Making

Replaces hours of manual calculation with instant visual intelligence. Operators go from data to decision in seconds, not hours.

8+

systems managed from one dashboard

Scale Without Complexity

Manage 2, 4, or 8+ independent RAS loops from a single platform. Complexity doesn't grow linearly with the number of systems.

INNOVATION

60+ Water Chemistry Functions — A Unique Analytical Engine

The Aqua Intel Chart

Every data point, every interaction, every chemical relationship — unified in a single visual chart.

Red/orange zones indicate toxic parameter levels requiring immediate attention. Green zones show the safe operating range for the specific species and life stage.

The chart displays 9 different chemicals with unique directional angles showing their impact on water quality.

This is not a dashboard. It is a decision engine.

Ammonia Forms × pH

Continuously calculates the equilibrium between toxic NH3 and non-toxic NH4 as a function of pH and temperature. Critical for species-specific safety.

CO2 Forms × pH

Computes CO2 concentrations from other parameters, reducing sensor costs while maintaining full visibility. Eliminates the most expensive monitoring gap.

Multi-Solution Decision Engine

Models 9 different chemicals simultaneously and generates multiple optimum management recipes per scenario. Operators compare solutions side-by-side and act decisively.

BUSINESS MODEL

Recurring Revenue with High Gross Margins

CORE REVENUE

Software License (SaaS)

Annual/monthly subscription per facility. Pricing scales with the number of RAS loops monitored. Predictable, recurring revenue with strong unit economics.

TECHNICAL SALES

Technical Sales & Integration

Hands-on technical sales process: on-site assessment, sensor integration with existing infrastructure (SCADA, PLCs), and custom deployment. Deep customer relationship from day one.

HIGH MARGIN

Consulting & Advisory

Premium water chemistry optimization and RAS facility management consulting. High-margin, relationship-driven revenue stream that deepens customer lock-in.

MARKET OPPORTUNITY

A Multi-Billion Dollar Market with Explosive Growth

Market at a Glance

$5-7B

Global RAS market (2025)

Growing to $10–17B by early 2030s at 8–10.5% CAGR

6,500+

Commercial RAS installations globally

Up 30% from ~5,000 in 2020. 102 salmon-specific projects tracked.

$1.3B

Raised in land-based deals, Jan-May 2025

vs $780M in all of 2024. Investments could hit $2B for 2025.

€300M

Typical cost of a 20,000t RAS facility

Each facility = massive asset-protection incentive for monitoring.

Monitoring Software Market

WQ Monitoring Market

$437M–$1.2B today → $786M–$2.8B by 2030–2033. Software is the fastest-growing segment (~30% of revenue).

Precision Aquaculture

$789M in 2024 → $1,435M by 2030 (11.1% CAGR). Includes monitoring, feeding, and analytics. Europe = 22% of global market.

Europe RAS Market

€842M in 2023 → €1,483M by 2031 (7.3% CAGR). Norway leads, followed by Denmark, UK, France.

Production Target

Land-based salmon output projected to reach ~200,000 tonnes by 2030 — adding 5% to global supply.

GO-TO-MARKET STRATEGY

Multi-Channel Sales Approach with Technical Depth

Sales Channels

Direct Sales (Technical)

On-site demos, sensor integration assessment, and ROI-driven proposals to RAS operators and facility engineers.

Aquaculture Insurance Companies

Risk-reduction value proposition. Insurers increasingly require real-time monitoring as a condition for mortality coverage.

Large-Scale & Hobby Aquariums

Public aquariums, zoos, research aquariums, and advanced hobbyist markets requiring precision water quality control.

Educational Institutions

Universities, marine biology programs, and aquaculture training centers as both customers and technology validation partners.

Platform Partners (e.g. MoreFish)

Integration with aquaculture management platforms to offer Aqua Intel as the embedded water quality intelligence layer.

Expansion Playbook

1. **Phase 1: Norway**

   160+ commercial RAS farms. Anchor customers in the world's most advanced aquaculture market.

2. **Phase 2: Nordics & Europe**

   Scotland, Denmark, Iceland, Faroe Islands. Iceland alone has 3 major facilities under construction.

3. **Phase 3: North America & APAC**

   Enter US, Canada, Asian markets through strategic partnerships with RAS OEMs and sensor manufacturers.

4. **Phase 4: Global Standard**

   Establish Aqua Intel as the industry standard for water quality intelligence in recirculating aquaculture.

PRODUCT ROADMAP

From Current Platform to Global Scale

Q1–Q2 2026
VALIDATE

- Deploy current system with small-scale pilot users
- Collect user feedback and refine UX/UI
- Validate safe/toxic zone accuracy across species
- Establish baseline KPIs and success metrics

Q3–Q4 2026
DEPLOY

- Onboard first commercial pilot customers
- Complete sensor integration with major hardware brands
- Launch multi-system dashboard for 2–4 RAS loops
- Technical sales team activation

H1 2027
SCALE

- Expand platform to 8+ simultaneous systems
- API integrations with MoreFish and partner platforms
- Insurance company partnership agreements
- Aquarium and education vertical launch

H2 2027+
GROW

- Advanced AI-driven predictive analytics
- Automated dosing pump integration
- Multi-language platform for global markets
- Mobile monitoring application

THE TEAM & PARTNERS

Deep Domain Expertise Backed by Industry Partners

Founder / CEO

Founder of Noras Watertech AS. Deep technical expertise in aquaculture engineering and water chemistry. Architect of the Aqua Intel platform and developer of 60+ water chemistry functions. Combines hands-on RAS operational experience with software development — a rare intersection that competitors cannot replicate.

Technical Team

Cross-functional team spanning software development, water chemistry engineering, and RAS facility operations. Key competencies: sensor integration, real-time data analytics, and scientific modeling.

STRATEGIC PARTNERS & ECOSYSTEM

Noras Watertech AS

Parent company. RAS engineering, design and construction. 15+ years of aquaculture infrastructure expertise.

MoreFish AS

Aquaculture management platform. Strategic integration partner for embedded water quality intelligence.

[Partner Company 3]

Company description to be added. Sensor technology / hardware integration partner.

[Partner Company 4]

Company description to be added. Insurance / financial services partner.

REGULATORY TAILWINDS

The Voluntary Monitoring Era Is Ending

What's Changing

EU Digital Traceability Mandate
Full digital traceability for fresh aquaculture products effective January 2026. Processed products by 2029.

Norway 2025 Parliamentary Agreement
Calls for "improved monitoring through new technology and automatic data transfer from farmers to authorities."

Traffic Light System
25% of Norway's production zones classified "red" in 2023 — requiring production reductions and stricter monitoring.

Insurance Requirements
Insurers increasingly require real-time monitoring as a condition for mortality coverage — making it a prerequisite.

Why This Matters for Aqua Intel

Regulatory momentum is converting water quality monitoring from a discretionary purchase into a compliance necessity.

The EU Water Framework Directive requires aquaculture operations to maintain specific thresholds: dissolved oxygen >6 mg/L, ammonia <0.025 mg/L for salmonids.

Norway's future regulation will be based on "actual and measurable environmental impact" — requiring continuous digital monitoring that manual processes cannot deliver.

Scotland's SEPA now requires operators to invest in "more accurate monitoring" with new enforcement for compliance.

Aqua Intel is positioned at the exact intersection of what the market needs and what regulators are about to require.

INVESTMENT OPPORTUNITY

Join Us in Building the Intelligence Layer for Global Aquaculture

Proprietary Technology

60+ water chemistry functions built over years of R&D. Deep domain expertise that competitors cannot easily replicate.

Explosive Market

Global RAS market doubling to $10–17B. $5B+ invested in 150+ projects. Land-based salmon investments hit $1.3B in first 5 months of 2025 alone.

Scalable SaaS Model

Per-facility licensing creates predictable recurring revenue. Software = 30% of monitoring market revenue and the fastest-growing segment.

Regulatory Catalyst

EU 2026 digital traceability mandate + Norway’s automatic data transfer requirement = monitoring shifts from optional to mandatory.

USE OF FUNDS

Capital Deployment Plan

Allocation

50% **Sales & Marketing**

Technical sales team, channel development, conference presence, digital marketing, insurance partnerships

25% **Product Development**

Platform hardening, sensor integrations, AI features, mobile app, API ecosystem

15% **Operations**

Infrastructure, customer success, support, onboarding

10% **G&A / Working Capital**

Legal, accounting, office, contingency

Key Milestones

Year 1:
Anchor customers in Norway. Build technical sales team. Validate pricing. Insurance company pilots.

Year 2:
Expand into European markets. Launch aquarium and education verticals. Scale recurring revenue. OEM partnerships.

Year 3:
Enter North America and APAC. Establish Aqua Intel as the global standard for RAS water quality intelligence.

ROI & EXIT

How Investors Realize Returns

Strategic Acquisition

RAS equipment manufacturers, large aquaculture corporations, and water technology companies are natural acquirers. Proprietary technology and installed base create significant strategic value.

Growth-Driven Valuation

SaaS revenue model with strong unit economics drives compounding valuation growth. As ARR scales through geographic expansion, enterprise value multiplies.

Secondary Round / PE Exit

Proven technology, recurring revenue, and a multi-billion-dollar global market positions Aqua Intel as an attractive target for growth-stage PE funds.
